

to Adam ▾

Hello Adam,

Thank you for reaching out and for your interest in accurately documenting the materials used in **Ninja** products.

Below is the information regarding the non-stick coatings used in the three **Ninja** air fryer models you mentioned:

1. **Ninja** Air Fryer Pro (AF141)

The AF141 model typically features a **PTFE-based non-stick coating** (commonly known as Teflon) on the basket only. These use **aluminum baskets coated with PTFE**, which may contain trace amounts of **PFOA**. These coatings are **food-safe and compliant with EPA guidelines**.

2. **Ninja** Combi Multicooker

This unit uses **Ninja's** proprietary **NeverStick™ coating**, which is a **PTFE-based polymer**. However, it is **PFOA-, PFAS-, cadmium-, and lead-free**, and manufactured at extremely high temperatures (up to 30,000°F) to ensure durability and safety. The coating is **FDA-approved** and designed to resist chipping and flaking.

3. **Ninja** AF161 Max XL Air Fryer

The AF161 features a **ceramic non-stick coating** on its basket and crisper plate. This coating is **PTFE- and PFOA-free**, making it a safer alternative to traditional Teflon-based coatings

Should you have any further questions or require additional information, please do not hesitate to reach out. We are here to assist you.

Regards,

Tia
